L1 - Demonstrate the AWS EC2 Ubuntu Instance Creation steps and connect to EC2 Instance using Mobaxterm.

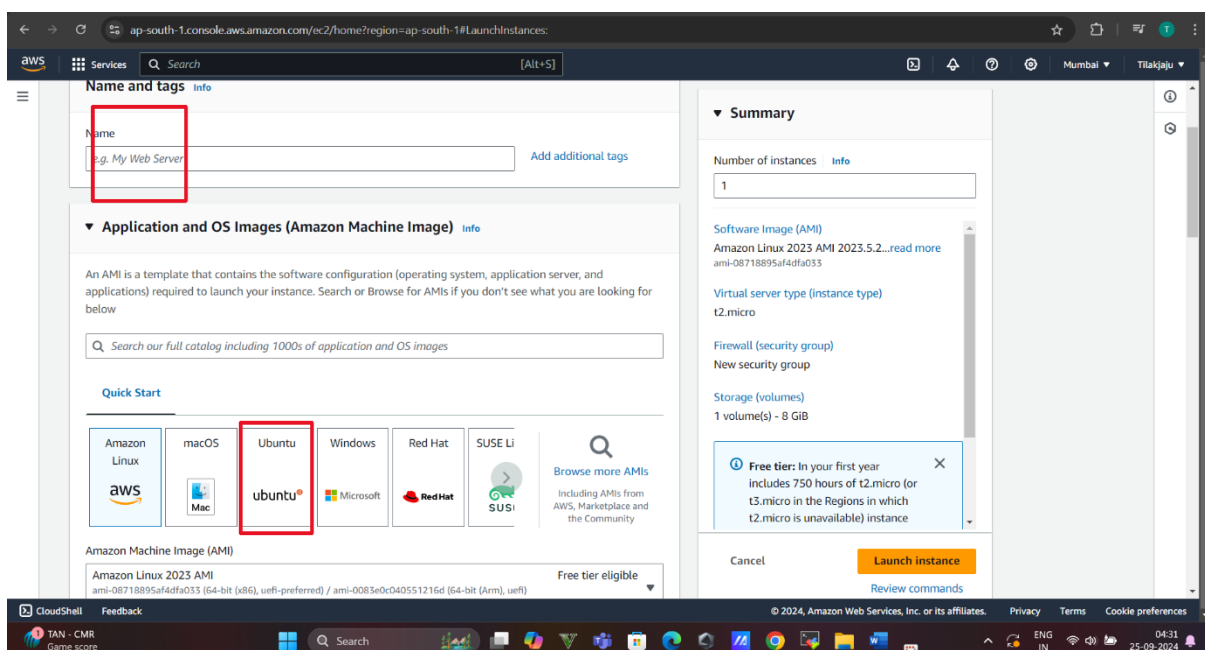

Step 1: Login the AWS console to your server.

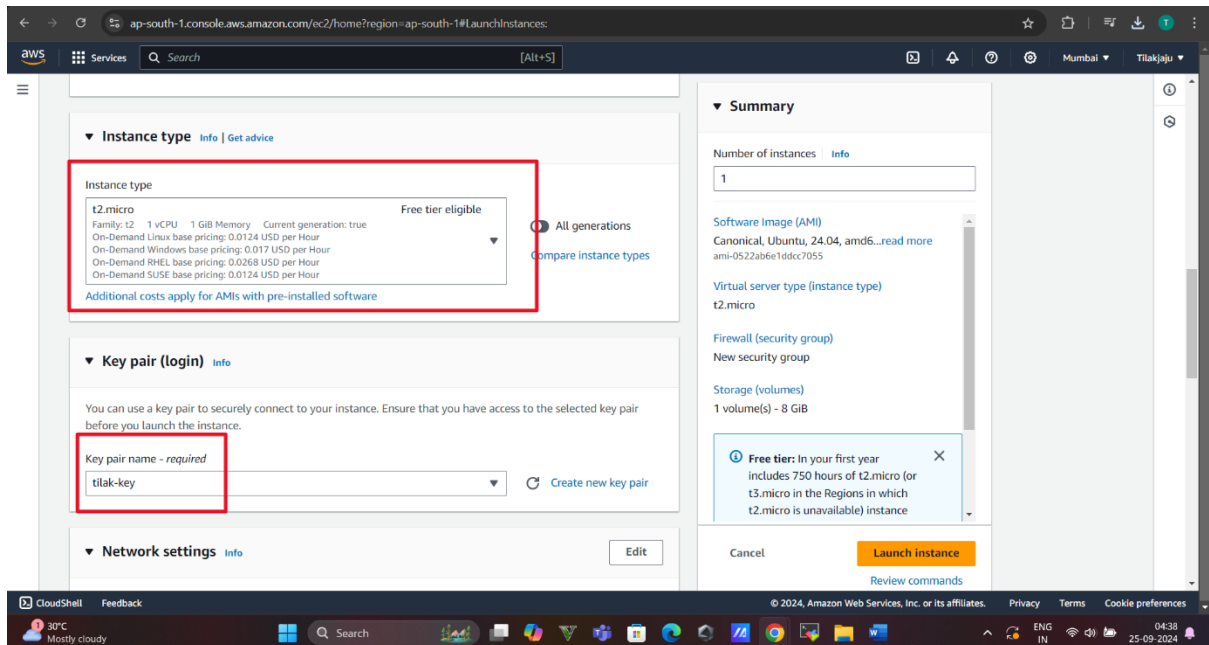

Step 2: Go to the instance launch and launch the instance in the ec2.

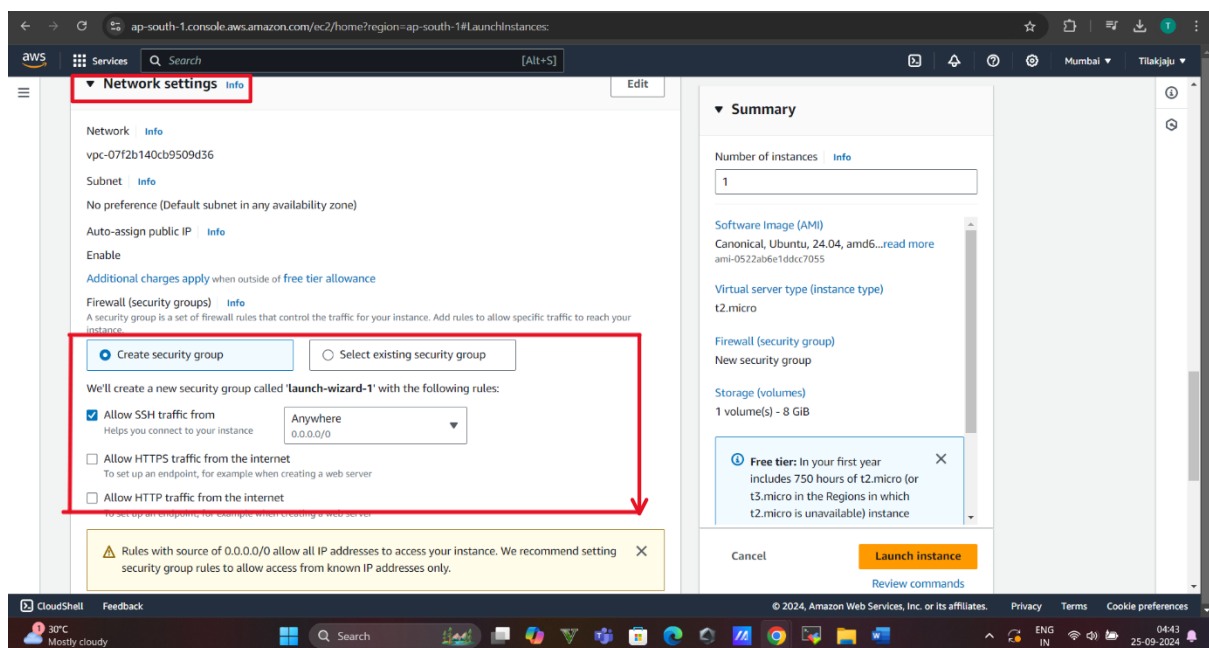

Step 3: Give the name to the instance and select the quick start and select the free tier of it which is shown in figure.

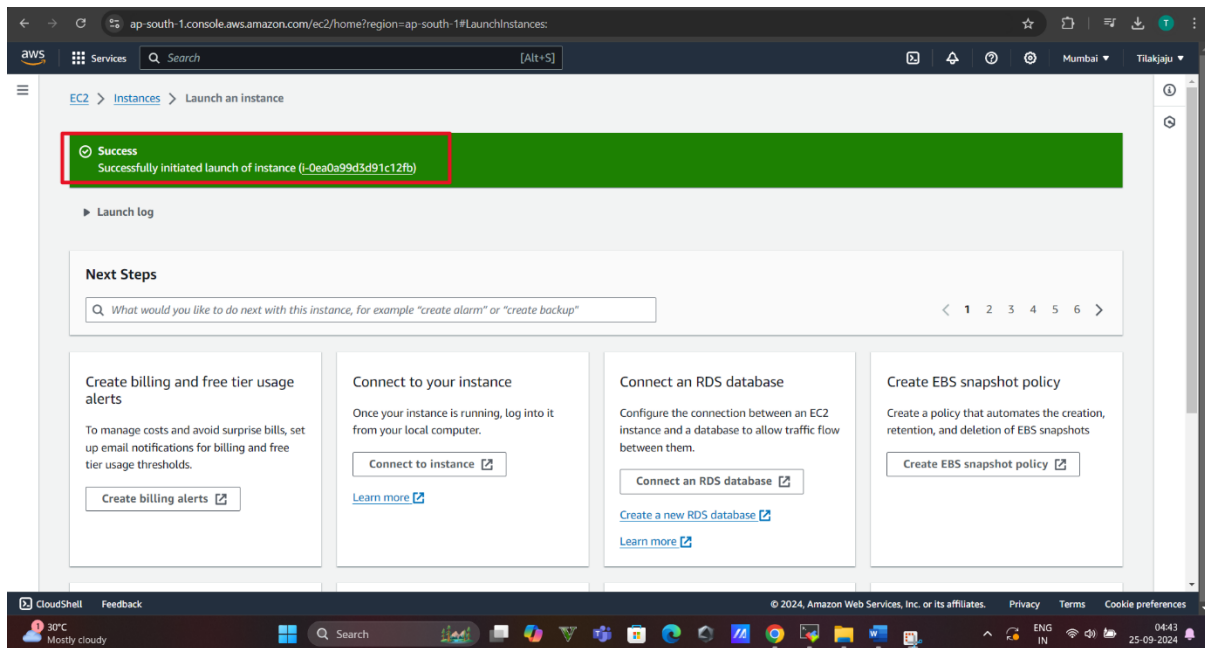

Step 4 : Now select the instance type which is t2-micro and the key pair the instance.

Step 5 : Then check the network settings as all to be default. And click on the launch instance.

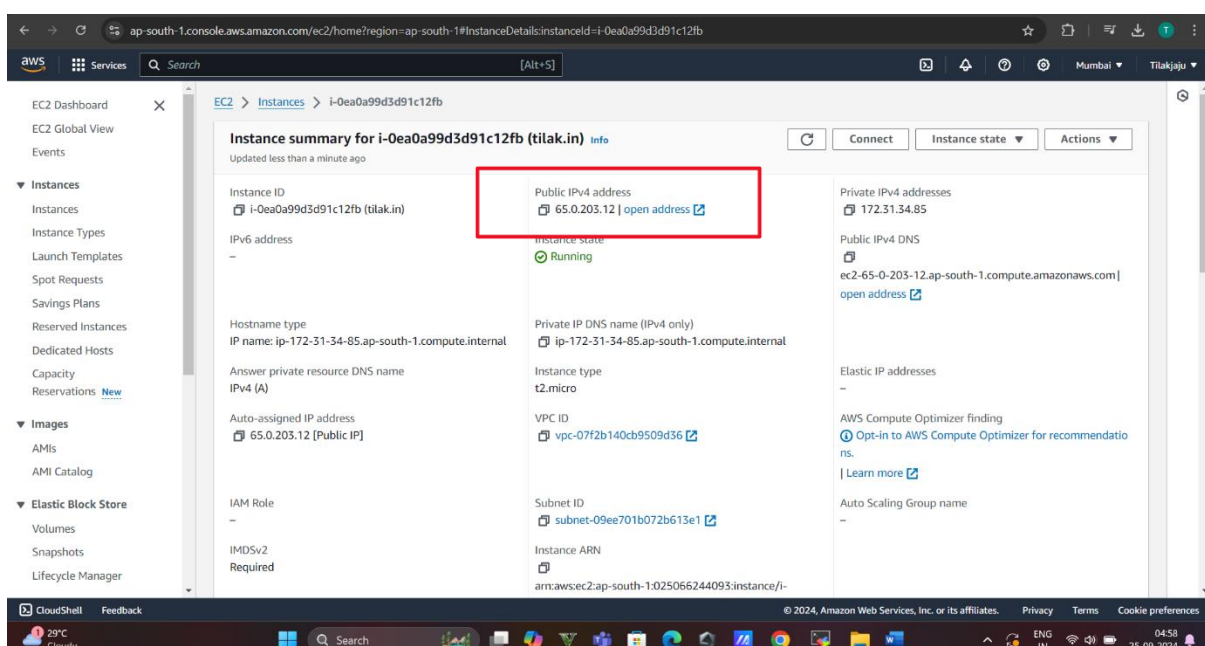

Step 6 : The instance will be launched in the server.

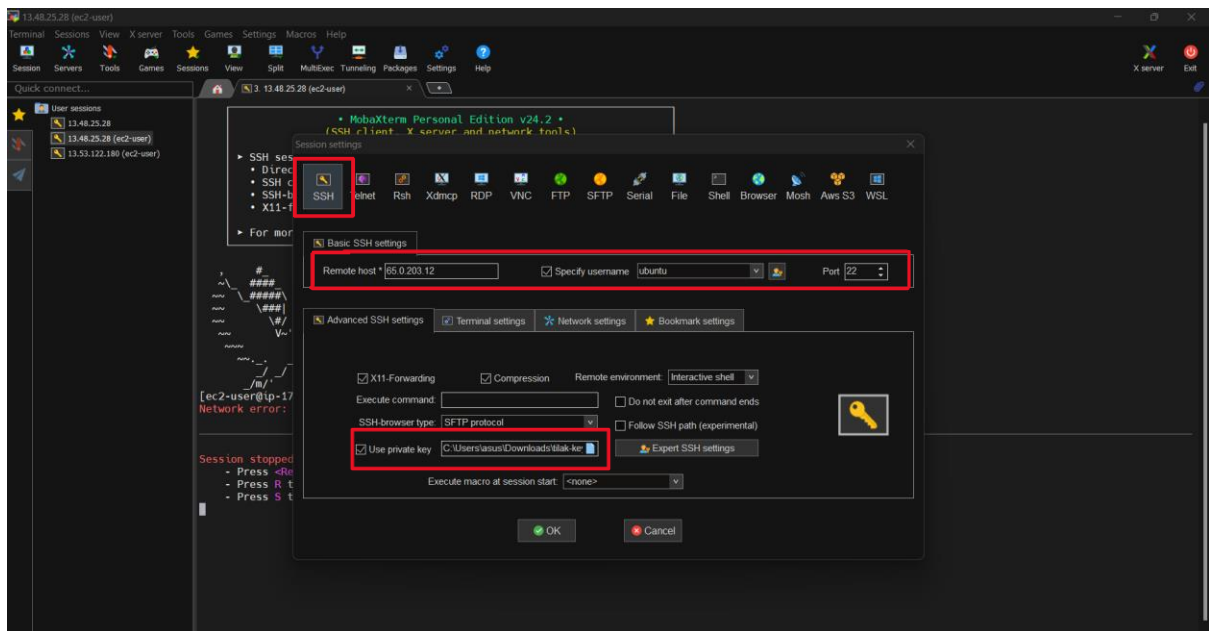

Step 7 : Now the instance has been launched now we will connect the ec2 instance by using the mobaxterm.

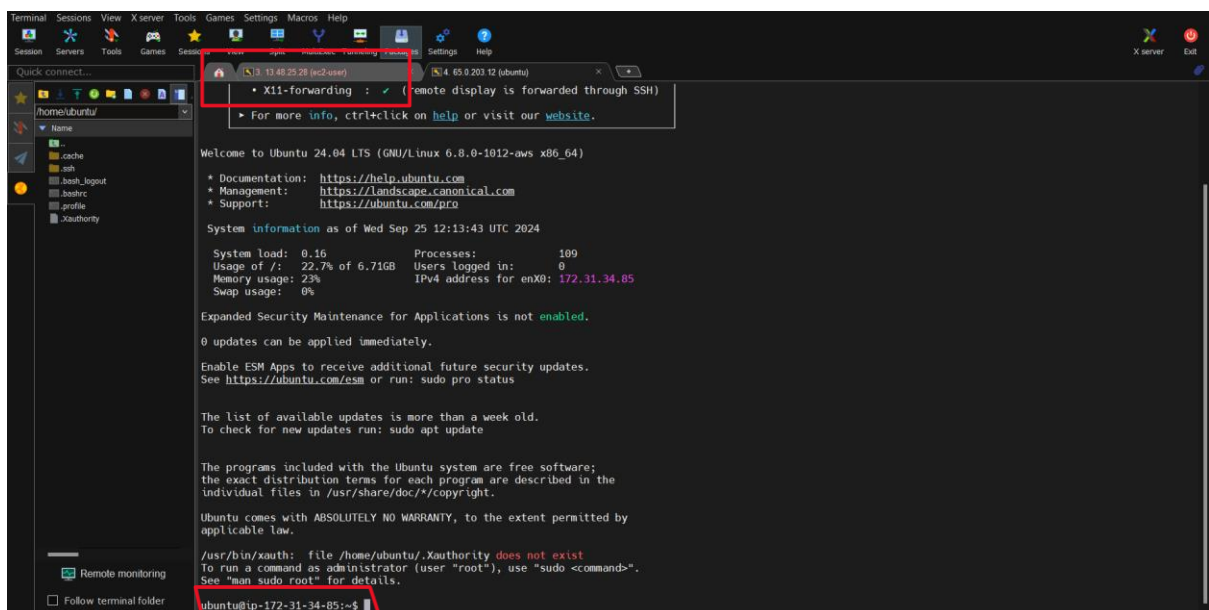

Go to instance and copy the ip address first.

Step 8 : now open the app of mobaxstem and go to the SSH and give the ip address then put the name as ubuntu give the key pair and press on the ok.

Step 9 : when we press the ok the instance will be connect by the mobaxteam

This is how the instance is connect .

THANK YOU
